Observational data from 38 meteorological stations, which are located more or less uniformly throughout the region of Primorskiy Kray were used to calculate the radiation balance and its components according to the formula: $R = (Q + q)(1 - a) - E$, where $(Q + q)$ is the total radiation, a is the integral albedo of the underlying surface, and E is effective radiation. Within the latitudes 43° to 47°N the annual radiation balance for this region is 35.8 kgcal/cm^2·year. This is 13.1 kgcal/cm^2·year lower than the annual balance for the
